WIP5000 Wireless IP Handset

WirelessIP5000 is an all-around wireless IP phone supporting the Session Initiation Protocol (SIP), which is essential for multimedia communications. With flexible support for the latest CIX IP businessphone systems, you can painlessly and flexibly introduce the WirelessIP5000 making use of your existing Toshiba CIX office communications environment. Reduce communications costs, while at the same time greatly reducing the administrative cost and burden of your telephony equipment. Make your communications efficiency soar, both inside the company and out.

Key Features:

- **Phone book** Capacity: 200 entries; back up/restore phone-book file via USB cable (option)
- **Call history** Display a log of up to 20 incoming/outgoing calls
- **Call time** Display the duration of a call
- **Dialled number display** Display dialled phone numbers
- **Mute** Press a button to prevent sound being transmitted to the other party
- **Redial** Press and hold the button to redial the last number called
- **Unanswered call display** A pop-up displays unanswered calls
